RELIEFLINK / COMMUNITY SUPPORT PORTAL

PRACTICAL USER GUIDE

ReliefLink

User Manual

Clear steps for requesting support and coordinating relief goods.

HOUSEHOLD USERS

Create an account, maintain household details, request relief goods, and follow distributions.

ADMINISTRATORS

Manage household records, inventory, requests, distribution batches, conversations, and reports.

Prepared from the ReliefLink system screens and workflows

Version 1.0 | October 2026

How to use this manual

Choose the section that matches your account. Household users work from the household portal. Administrators use the separate Admin portal. Menu names below match the ReliefLink interface.

01 Getting started

Open ReliefLink, register, sign in, and find your way around.

02 Household user guide

Household records, QR code, relief requests, history, profile, and chat.

03 Administrator guide

Households, relief goods, requests, and user accounts.

04 Run a distribution

Create a batch, scan a household, check eligibility, record goods, and close the batch.

05 Chat, reports, and help

Communicate with households, review reports, and resolve common issues.

> **NOTE** The system may be updated over time. If a button or field differs from this guide, follow the on-screen label and ask your ReliefLink administrator for help.

01 Getting started

Access and accounts

Open the ReliefLink landing page in a supported web browser. Choose **Create an account** for household access or **Sign in** if your account already exists. Staff should choose **Admin portal** and use their assigned staff credentials.

Create a household account

1. Select **Create an account**.
2. Enter your first name, last name, email address, username, and password. Re-enter the password to confirm it.
3. Choose your Province, Municipality, and Barangay from the address selectors. Provide the required consent and submit.
4. Return to Sign in and enter your username and password. The system opens the household dashboard after a successful sign-in.

> **IMPORTANT** An account and a household record are separate. If the portal says no household is registered, contact the administrator so your account can be linked to a household.

Sign in and sign out

Use the household sign-in page for a household account and the Admin portal for an administrator account. Select **Logout** when finished, especially on a shared computer. If the username or password is rejected, check the correct portal and try again; contact the administrator if you still cannot access the account.

Navigation basics

Household pages use a left menu: Dashboard, My Household, Relief Request, Chat with Admin, Distribution History, and My Profile. The administrator menu includes Dashboard, Households, Relief Goods, Distributions, Requests, Business Chat, Reports, Users, and Settings. Select a menu item to open that part of the system.

02 Household user guide

Dashboard

Use Dashboard as a starting point and quick link to your main tasks. For the latest record details, open My Household, Relief Request, or Distribution History.

Review or update household information

1. Open **My Household**. Review the household name, address, contact number, family size, income, and eligibility status.
2. If editing is available, update the details that have changed. Select the correct Province, Municipality, and Barangay from the address fields.
3. Select **Update Information** to save. If the household is missing or the address is not accepted, contact the administrator.
4. Show the household QR code or provide the printed household ID at a distribution. The code identifies your household for staff lookup.

> **REMINDER** Keep your household information accurate. Eligibility is managed by staff; changing contact or address details does not itself approve a relief request.

Family members

The household page displays recorded family members and any senior or PWD indicators. If you need a member added or corrected and the page does not provide an editing action, ask the administrator to update the household record.

Submit a relief request

1. Open **Relief Request** and select the **Create New Request** tab.
2. Write a clear reason for the request. Select a positive quantity for each item you need. The available stock is shown beside each item.
3. You may request up to the displayed maximum number of different goods in one request. Check the item quantities and reason.
4. Select **Submit Request** and confirm if prompted. A success message means the request was sent for administrator review.

Follow your requests

Choose **My Requests** on the Relief Request page to review request records and their statuses. A request is pending until staff review it. An approved request is not yet a completed distribution; check the status or contact the administrator for updates.

02 Household user guide (continued)

Check distribution history

1. Open **Distribution History**.
2. Review the listed distribution date, batch or reference details, and goods recorded for your household.
3. If a recorded quantity or date looks wrong, send a message through **Chat with Admin** and include the relevant date or reference.

Update your profile and password

Open **My Profile**. To change your name or email, edit the account fields and select **Update Profile**. Your username is shown for reference and cannot be edited on this page. To change your password, provide the current password, enter a new password of at least 12 characters, confirm it, and select **Update Password**.

Message the administration team

1. Open **Chat with Admin**.
2. Type your message in the conversation box. Keep it between 1 and 2,000 characters.
3. Select **Send**. Return to the page to read the reply. Avoid sending passwords or other highly sensitive information in chat.

> **TIP** For quicker help, include your name, household ID, and the page or request you are asking about. Never share your password.

Household user quick checklist

- Check your household details before submitting a request.
- Use quantities no greater than the available stock shown.
- Save the household QR code or keep the household ID available for distribution.
- Check request status and distribution history for updates.
- Log out when you are done on a shared device.

03 Administrator guide

Administrator responsibilities

Administrators maintain the records used by the household portal and distribution process. Confirm information carefully before saving: household and user records affect who can be found, requests require review, and recorded distributions change inventory.

Dashboard and navigation

Sign in through **Admin portal**. Use the administrator sidebar to open the relevant section. The Requests item may show a pending-request count. Open a record to review details before acting.

Manage households

1. Open **Households** and use the search or tabs to find a household.
2. Select the household detail page to review contact details, location, household ID / QR code, members, eligibility, and related requests.
3. Choose Add Household to register a new household. Link a user account if appropriate and enter the household name, address, contact information, member count, and income.
4. Choose Edit to update existing details and eligibility. Select a valid Quirino Province, municipality, and barangay combination.
5. Use family-member actions on the household detail page to add or edit member information, including senior and PWD indicators.

Review relief requests

1. Open **Requests** and select a pending request.
2. Read the household, reason, item list, and requested quantities. Confirm availability and any relevant household details.
3. Use the available action on the request detail page to approve or reject it. Add a clear note when the screen offers a notes field.
4. The household can review the updated status in **My Requests**. When goods are actually handed over, record the distribution through a distribution batch.

> **IMPORTANT** Approval records a decision; it does not deduct stock or complete a handover. Use the distribution workflow to record goods given to a household.

03 Administrator guide (continued)

Manage relief goods and inventory

1. Open **Relief Goods** to review inventory. Use the Inventory, Low Stock, or Expiring views to focus on items needing attention.
2. Select Add Relief Goods to enter a category and name. Complete the available description, unit, starting quantity, reorder level, expiry date, source, and unit cost fields.
3. Open an item detail page to review its stock information and movement history.
4. Use Stock In when goods arrive. Enter a positive quantity and notes, then save. Use Stock Out only when goods are intentionally removed outside the distribution workflow.
5. Edit an item to update its details or make a recorded quantity adjustment. Delete items only when appropriate and allowed by the system.

> **IMPORTANT** A distribution recorded through a batch automatically reduces inventory. Do not also record the same handover as a manual Stock Out, or stock may be deducted twice.

Manage user accounts

Open **Users** to search existing accounts, view users by location, create an account, or edit a user. When creating a user, enter the required identity and login details, assign the correct role, and provide a valid location if requested. The user list also allows eligible administrators to activate or deactivate accounts. Verify the person and role before saving changes.

Settings

Open **Settings** to review the options available to your installation. Available settings may depend on your account permissions and system configuration.

Good recordkeeping practices

- Use consistent names and descriptions for goods and batches.
- Record an explanation in notes fields when an adjustment needs context.
- Check available stock before approving or distributing requested items.
- Review the household identity before updating eligibility or contact details.

04 Run a distribution

A distribution batch groups handovers for a scheduled date. Each household handover is recorded separately against the batch. Have the household QR code or household ID ready.

Create a batch

1. Open **Distributions** and choose **Create Distribution**.
2. Enter a unique batch code, distribution date, and an optional description.
3. Save the batch. The system opens its detail page. Start scanning households from that batch.

Find and verify a household

1. From the batch, choose the option to scan or add a household.
2. Scan the QR code using the camera control, or enter the household ID manually. Allow camera access if prompted.
3. Select the submit / lookup action. Review the household shown by the system.
4. Check the eligibility status and household information. If identity or eligibility is unclear, pause and contact the appropriate administrator before handing over goods.

Record goods handed over

1. Continue to the distribution form for the verified household.
2. Enter a positive quantity for each item handed over. Check the displayed available stock; the number of different goods is limited by the system.
3. Review the household, batch, items, and quantities carefully.
4. Submit the distribution. Wait for the success confirmation and open or print the distribution receipt for the household record.
5. Repeat the scan and record steps for each household in the batch.

> **IMPORTANT** Only record goods that were actually handed over. A saved distribution deducts the selected quantities from inventory and may mark approved requests as distributed.

Complete or cancel a batch

When all planned handovers are recorded, return to the batch detail and choose **Complete Batch**. If the event will not proceed, use **Cancel Batch** where available and follow your organization's recordkeeping procedure. Check the batch status after the action.

05 Chat, reports, and help

Business Chat

Open **Business Chat** to see household conversations. Select a conversation, read the message history, and reply in the compose box. Keep replies clear and focused on the household's request or question. A household user sees the corresponding conversation under Chat with Admin.

Reports

Open **Reports** to view report categories provided by the system. Available reports include requests, inventory, households, distribution, beneficiaries, and activity. Choose a report to review its records and available filters or export options. Use the report page labels to choose the date range or other criteria, then review the result before sharing it.

Common issues

I cannot sign in. Confirm you are using the correct portal and username. Check your password and contact an administrator if access remains unavailable.

I cannot submit a request. A household record must be linked to your account. Include a reason and at least one item quantity above zero. Do not exceed stock or the maximum number of goods.

An item I need is unavailable. The item may be inactive or out of stock. Contact the administrator; do not submit a quantity beyond the amount shown.

The QR code cannot be scanned. Allow camera access, improve lighting, and hold the code steady. If needed, enter the household ID manually.

A request is still pending. Requests require administrator review. Use Chat with Admin to ask for an update and provide the household ID or request details.

A saved change looks incorrect. Contact the administrator promptly with the page name, record or batch ID, and a description of the correction needed.

> **HELP** When contacting support, provide the page name and relevant household, request, goods, or batch ID. Do not send your password.

ReliefLink

Community support portal
This manual describes the workflows available in the project version reviewed in October 2026. Screens and options may change as the system is updated.

APPENDIX / SAMPLE DATA

Plan for your sample records

This example uses the municipalities and barangays listed in the ReliefLink address data. It assumes 10 user accounts in each municipality and 10 household records in each barangay. Names and login details below are examples only.

MUNICIPALITY	BARANGAYS	10 HOUSEHOLDS / BARANGAY
Aglipay	25	250
Cabarroguis	17	170
Diffun	33	330
Maddela	32	320
Saguday	9	90
Nagtipunan	16	160
TOTAL	**132**	**1,320**

Account and household examples

For the account list, create 10 household-user accounts per municipality. Use the number suffix 01 through 10. The reserved example.invalid domain makes clear these are sample emails, not real addresses.

USERNAME	ROLE	MUNICIPALITY	SAMPLE EMAIL
aglipay-user-01	user	Aglipay	aglipay-user-01@example.invalid
cabarroguis-user-01	user	Cabarroguis	cabarroguis-user-01@example.invalid
diffun-user-01	user	Diffun	diffun-user-01@example.invalid

For the household list, create 10 records inside every barangay. Enter an actual household name during real use. Household IDs are generated by the system; these examples illustrate fields only.

HOUSEHOLD ID	HOUSEHOLD NAME	BARANGAY	MUNICIPALITY
QRN-2026-A1B2C3D4	Sample Household 01	Alicia	Aglipay
QRN-2026-0F1E2D3C	Sample Household 02	Alicia	Aglipay

What the totals mean for portal access

60 accounts and 1,320 household records are different totals. Household users can submit requests only when an account is linked to a household. If all 1,320 households need their own portal login, plan one linked household-user account per household. If only 60 accounts need portal access, the remaining household records can still be maintained by staff, but those households will not have their own user login.

> **In the admin portal:** add or review accounts in **Users**, and create household records in **Households**. Select the correct Municipality and Barangay for every household. Link the user account to the intended household when portal access is required.
